DATE OF BIRTH
03/30/1990

Gustavo Lemes Leite Barbosa

My name is Gustavo and I am a mechatronic engineer with a masters in mechanical engineering, recently I have been working with development, mostly with front-end features, although I have some knowledge regarding back-end issues. I am currently focused on the React and React-native ecosystems using typescript as developing language, Redux to manage global states and Jest for testing. I have just finished a bootcamp that focused on the stack of node for the back-end and React for the front-end. I am looking for a front-end position for both web and mobile development.

EXPERIENCES

BRAINWEB I.T SOLUTIONS
Front-end developer
Campinas, SP
feb/2019 - apr/2020

During this experience I have acted in several projects, mostly as front-end developer for both mobile and web projects. The projects were usually built under React or React-native ecosystems. In some specific projects I have worked with native Android. Git was used as the version control system and the Scrum methodology was applied for project management.

AFFINITY PETCARE
Trade Marketing: Intern
Campinas, SP
2016

In this experience as an Intern in this European multinational company I had the duty of implementing the minimum mix project for the company's product portfolio, I have worked mostly with excel and creating macros with VBA, I also dealt with the integration of a system for distributors that gave visibility of the sales made by those distributors.

AFFINITY PETCARE
Sales intelligence: Intern
Campinas, SP
2015

As a sales intelligence intern I had to create a daily report that compiled the sales made nation-wide separated by several filters. I have also worked in a project for the unification of the tables of prices separated by region.

EDUCATION

UNICAMP
Masters in: Mechanical engineering
Campinas, SP
2017-2019

The research that I have done during my masters focused on developing an algorithm for optimal team allocation regarding teams that use the Scrum methodology and share a common backlog. During this experience besides taking classes and writing my thesis I was able to publish three articles two of them in a magazine and one in a symposium.

UNICAMP
Major in: Mechatronic engineering
Campinas, SP
Received degree in 2016

I have graduated as mechatronic engineer, during college I had the opportunity to study topics such as control-theory, automation and robotics. It was also my first contact with coding, at the time I have learned the imperative and object-orientated paradigms with C and java programming languages.

ČVUT
Exchange program
Winter 2013/2014

I had the opportunity to do an exchange program in Prague. The program was mainly focused on research. I have worked with solar panels defect and potency analysis and got a recommendation letter from my professor and head of the department. It was also a great experience getting to know a different culture and meeting people from around the world.
